

Sales Performance Based Queries in SSMS w.r.t. SQL

The screenshot displays the SQL Server Enterprise Manager (SSMS) interface. On the left, the 'Server Explorer' pane shows the hierarchy of the 'laptop-ekoigt17 (SQL Server 16.0.1000.6)' instance. The 'Databases' folder is expanded, showing 'SalesDB' as the selected database. The right pane shows a SQL script with the following content:

```
CREATE DATABASE SalesDB;
GO
USE SalesDB;
